

SURVEILLANCE SYSTEM AND METHODS REGARDING SAME

5

Abstract of the Invention

A system and method for use in monitoring a search area includes positioning a plurality of imaging devices at one or more installation sites such that corresponding fields of view for the plurality of imaging devices cover a defined search area. For example, each field of view of each
10 imaging device may include a field of view portion which overlaps with at least one other field of view of another imaging device, e.g., the field of view portion which overlaps may be greater than about 25 percent and less than about 85 percent of the field of view of the imaging device. Further, for example, images may be fused using one or more homography
15 transformation matrices.

CERTIFICATE UNDER 37 CFR §1.10:

"Express Mail" mailing label number: EL 888272229 US

Date of Deposit: December 27, 2001

I hereby certify that this paper or fee is being deposited with the United States Postal Service "Express Mail Post Office to Addressee" service under 37 CFR §1.10 on the date indicated above and is addressed to the Assistant Commissioner for Patents, ATTN: Box PATENT APPLICATION, Washington, D.C. 20231.
